

Staying ahead of cyber risks

How identity security maturity drives resilience

The expanding number and types of identities not only heightens security vulnerabilities, it also increases compliance pressures and raises cyber insurance costs.

↑ 30+%

growth in machine identities in the next 3-5 years

↑ 14%

growth in digital identities within the next 3-5 years

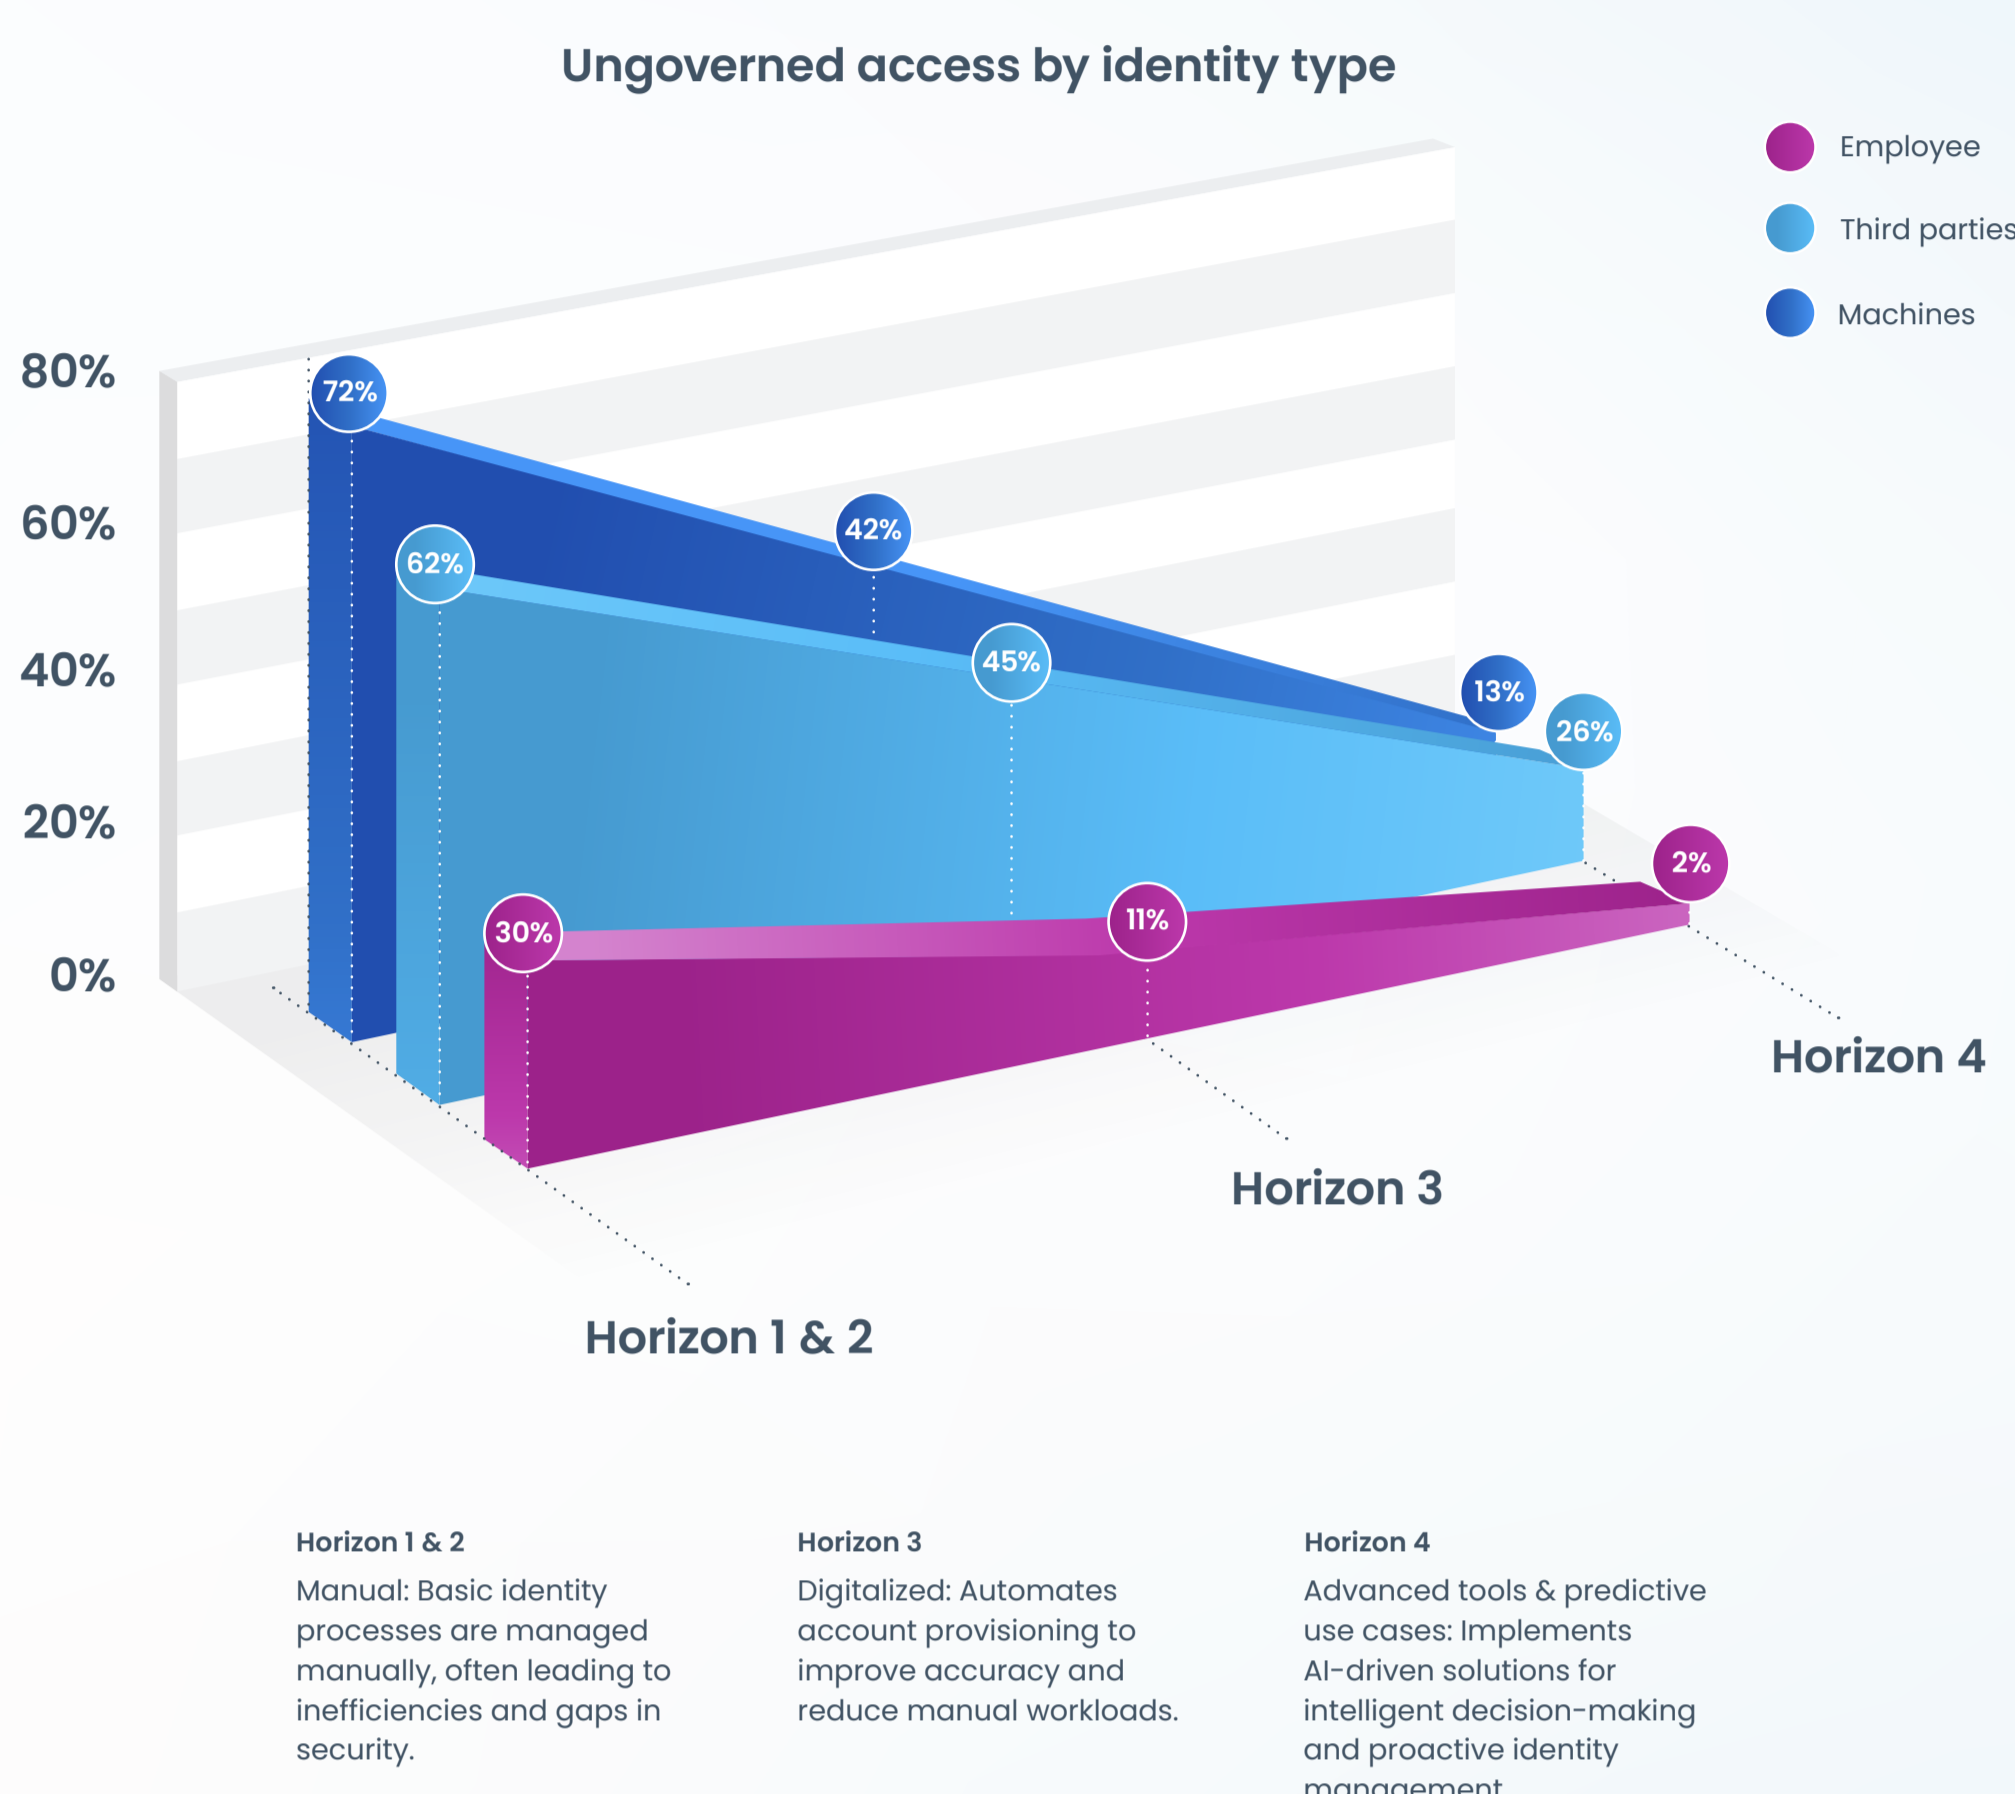

↑ 77%

rise in cyber insurance premiums over 3 years

↑ 7x

growth of identity-related regulations since 2010

A recent survey of ~350 IAM and security decision makers reveals that ungoverned access remained a critical issue in 2024.

Machine identities represent the greatest security risk often outnumbering humans 10 to 1

Machines require specialized management to prevent security risks and compliance failures.

66%

of companies say managing machine identities requires more manual effort*

60%

of companies say they've had audit issues stemming from machine identities*

72%

of companies say they intentionally retain dormant machine identities*

*Machine identity crisis: The challenges of manual processes and hidden risks

Secure every identity. Manage all access. Reap the rewards.

Organizations that invest more strategically in IAM reduce identity-related security issues and the blast radius of incidents while improving their overall cyber resilience.

~40%

faster to detect and respond to cyber attacks for Horizon 4+ organizations due to AI

83%

of organizations reported fewer identity-related security issues due to their identity security investments in 2023

40%

reduction in losses among cyber insurers, indicating improved management of cyber risk

Risk reduction success stories, by the numbers

3x

Reduction in cyber risk, achieved by setting appropriate privileges for approximately 6,000 accounts

12k

Non-employees empowered with secure identities

144k

Automated account modifications and verifications reducing potential security threats

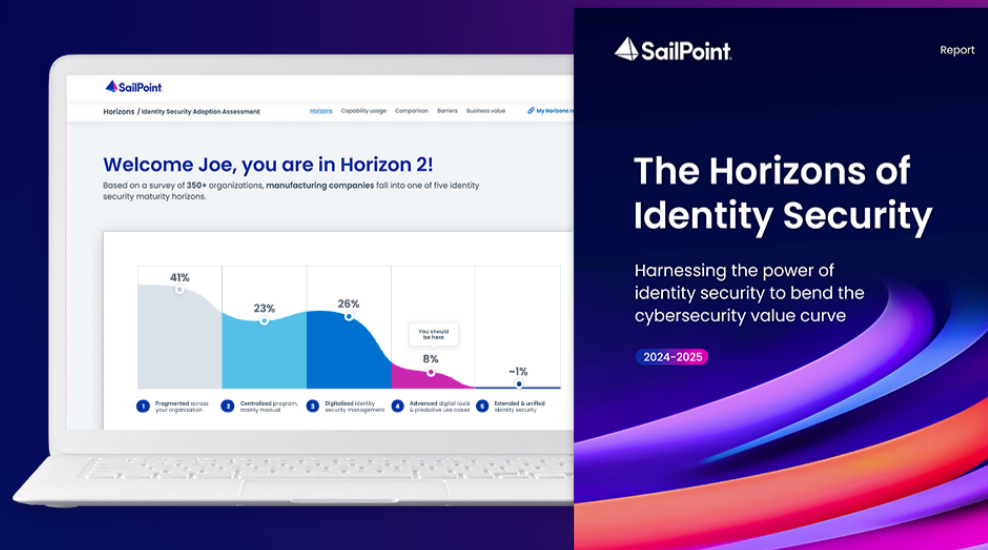

>\$3M+

Saved by preventing ransomware payment through robust identity security

Assess your current position and improve cyber resilience.
