Secure Your Enterprise.
Empower Your Workforce.

Securely connecting the right people to the right technology in your modern enterprise can often feel beyond reach. In fact, without the right solution, it probably is.

Most enterprises house thousands to millions of identities, each with varying access requirements that change constantly based on business needs. Without a single view into all identities and their access rights across critical business assets, and the ability to manage them through automation, you are needlessly exposed to business, brand and financial risks brought on by the technology explosion.

However, with identity security at the center of your infrastructure, you can significantly reduce risks, improve productivity of your users and security teams, and build a security foundation capable of defending against today's most pressing threats.

SailPoint is the leading provider of identity security for the modern enterprise. At the core of SailPoint Identity Security is artificial intelligence and machine learning, a foundation that automates the discovery, management, and control of ALL access. It ensures that each identity, human or non-human, has the right access needed to do their job – no more, no less.
Discover why identity security is business essential for modern enterprises today.

Without identity security, how would your workforce do their job and remain productive without introducing security risks? How would a CIO prove to auditors they know for certainty who has access to their applications, systems and data? If you’re a CISO, how could you confidently report to the CEO and the board that all sensitive IP is secure from potential theft? Finally, how would you guarantee to your customers that their sensitive data is protected?

Evolving your identity security initiative is not a choice, it is mission-critical for modern enterprises today.

Our Difference is at the Core

**Unmatched Intelligence**
Artificial intelligence and machine learning provide 360-degree visibility, insight and remediation, so you can adapt and ensure the security of every identity.

**Frictionless Automation**
Automate and streamline identity processes to better discover, manage, and secure user access freeing your workers to focus on innovation, collaboration and productivity.

**Comprehensive Integration**
Extend your ability to embed identity context across your hybrid environment and centrally manage and control access to all data, applications, systems and cloud infrastructure—for all identity types.

SailPoint’s intelligent, autonomous and integrated solutions put identity security at the core of business operations and are trusted by the world’s largest, most complex organizations, including 58% of Forbes World’s Most Valuable Brands.
Choose Security that Adapts Intelligently

Our unmatched intelligence sees all your identities and the access they have at speed and scale. It can identify what’s necessary, what’s normal and what’s not with insights you cannot generate on your own.

Gain new insight into identity and access with the ability to:
- Find and address hidden risk such as access anomalies
- Identify and eliminate Shadow IT
- Prevent toxic access combinations
- Address access risk before it’s provisioned
- Automate access with smart recommendations

Automate and Simplify Identity Security at Scale

Streamline identity processes and decisions such as access requests, role modeling, and access certifications, driving greater efficiencies across your organization.

Improve productivity while also spotting and responding to access risks.
- Enable dynamic, remote workforce with the right access
- Reduce help desk calls and cost
- Accelerate identity processes
- Eliminate manual provisioning efforts
- Automate the creation and maintenance of roles

Take Control: All Identities, Everywhere

Integration with thousands of connectors allows you to manage identity access across your hybrid environment.

Centrally manage and control access to data, apps, systems and cloud infrastructure.
- Connect to your entire digital ecosystem
- Improve time to value with faster integration to apps and data
- Centralize access controls and policies—for all identity types
- Control your IAM user experience in Slack, Microsoft and ServiceNow
- Robust APIs enable integration with business processes
Great Customer Success

Key Business Results
- 90% improvement on IT efficiency
- 90% of identity tasks automated

Access Certifications
- 1 year > 1 month

Provisioning New Users
- 14 hours > 2.5 minutes

Deprovisioning Worker Accounts
- 30+ days > 0 days
  - $800K cost savings

Self-Service Access Requests
- 62K requests filled automatically
- 0 help desk calls
  - ~$1M annual cost savings

Password Management
- 5.5K password resets performed
- 0 help desk calls
  - $150K cost savings

About SailPoint
SailPoint is the leading provider of identity security for the modern enterprise. Enterprise security starts and ends with identities and their access, yet the ability to manage and secure identities today has moved well beyond human capacity. Using a foundation of artificial intelligence and machine learning, the SailPoint Identity Security Platform delivers the right level of access to the right identities and resources at the right time—matching the scale, velocity, and environmental needs of today’s cloud-oriented enterprise. Our intelligent, autonomous, and integrated solutions put identity security at the core of digital business operations, enabling even the most complex organizations across the globe to build a security foundation capable of defending against today’s most pressing threats.
