

SailPoint File Access Manager

Governance gaps around unstructured and regulated enterprise data can expose organizations to significant security and compliance risks. Lack of visibility into where this data is, what it contains, and who has access to it can leave organizations open to compromise.

SailPoint File Access Manager is a comprehensive data access governance solution that gives enterprises visibility and control over unstructured and regulated data in applications, systems, and files, whether on-premises or in the cloud.

File Access Manager: Feature Overview

File Access Manager extends identity security and governance to applications, systems, and files across the enterprise and throughout the identity lifecycle. Key features include:

Data Discovery & Classification

Extensive array of classification policies to identify PII, IP, and other highly regulated data (GDPR, HIPAA, CCPA, PCI, etc.)

Permission Analysis

Reduce risk by identifying and remediating overexposed permissions and avoid “permissions creep” and insider threats by analyzing effective permissions and the management of access rights across both cloud and on-premises endpoints.

BENEFITS

SailPoint’s identity-centric approach to data access governance extends identity security to unstructured data so organizations can:

- ▶ Get a complete picture of where unstructured data lives, what sensitive information it contains, and who has access to it – so organizations can govern what’s most important.
- ▶ Align access models and controls with best practices to get visibility into the risk factors originating from unwarranted and unused access, identify potentially malicious activity, and monitor access policy violations.
- ▶ Easily identify personally identifiable information (PII) via an AI-powered data privacy engine with advanced classification capabilities.
- ▶ Automate complex Data Subject Access Request (DSAR) campaign workflows and address right-to-be-forgotten use cases.

Real-Time Monitoring

Monitor user activity and policy violations in real-time for greater security insight. Detect anomalous activity in real-time based on activity patterns and identity-aware security policies. Reduce attack surface by setting aside stale data that is no longer needed and clearing unused access.

Data Privacy

Automated DSAR campaign workflows, streamlined data discovery and review processes, data privacy engine with AI and NLP-based contextual detection of PII data, and identity searches for advanced classification capabilities.

Compliance Management

Quickly address DSAR responses, certify data access, meet privacy mandates, and deliver efficient responses to compliance audits.

About SailPoint

SailPoint is the leading provider of identity security for the modern enterprise. Enterprise security starts and ends with identities and their access, yet the ability to manage and secure identities today has moved well beyond human capacity. Using a foundation of artificial intelligence and machine learning, the SailPoint Identity Security Platform delivers the right level of access to the right identities and resources at the right time—matching the scale, velocity, and environmental needs of today's cloud-oriented enterprise. Our intelligent, autonomous, and integrated solutions put identity security at the core of digital business operations, enabling even the most complex organizations across the globe to build a security foundation capable of defending against today's most pressing threats.
