

Identity Governance for Cloud Storage Services

In today's business environments, employees must have access to organizational data when and where they need it, regardless of location. Cloud storage offer the needed agility and scalability. Information, however, is no longer stored in-house and IT has little to no control over the geography and the infrastructure in which the data is stored. A successful data breach is likely to result in sensitive data exposure, heavy direct financial loss, serious reputation damage and increased audit requirements.

How IdentityIQ File Access Manager Can Help

To effectively protect the unstructured data stored in cloud storage services, organizations need technology to provide them with full visibility into sensitive data stored within it, including who can and who is accessing the data – a complete understanding of cloud storage providers' data access models and usage.

Dramatically reduce security risk and increase compliance by:

- Identifying where sensitive data resides, who has effective access to it, how they are using it, and putting effective controls in place to secure it
- Providing proof of compliance during audits and reducing time spent on forensics
- Electing the rightful data owners and enabling them to protect their own data
- Extending the identity strategy to provide comprehensive access governance to unstructured data

Experience rapid ROI by identifying stale data and accounts, automating audit requirements, and streamlining access reviews and requests to reduce the IT workload.

Key Features and Benefits

Context-aware Activity Monitoring with Real-time Alerting

Activity monitoring is done in real-time, identifying shared link usage and sensitive data access. Every monitored activity is enriched with its full security context from in place security systems (Active Directory, or any other data source). The context is crucial to identify violations and respond to them rapidly, and is also available when performing forensics and activity policies.

Permissions Collection and Analytics

Automatically collect and analyze all granted entitlements on your Google Drive, Dropbox, OneDrive, and Box environments, while considering those users, groups, and custom permissions. Aside from answering who has access to what data, the process also reveals overexposed data, other implemented access management violations and bad practices.

Business Users Involvement and Data Ownership

Business users are the true owners of an organization's data. Electing the rightful data owners requires a deep understanding of the business – one that lies only in the minds of the employees. The elected owners are provided with a set of dedicated dashboards to equip them with actionable intelligence about the data they own.

Access Lifecycle Management

Access lifecycle management is the key to ensuring access is granted on a "need-to-know" basis. IdentityIQ File Access Manager streamlines access requests and manages periodic and risk-based access reviews for unstructured data. Automated provisioning and revocation of access reduces costs and IT workload while avoiding potential human errors.

Best Cloud Storage Coverage in the Market

To ensure organizational data is protected, IdentityIQ File Access Manager covers Google Drive, Dropbox, OneDrive, and Box with the same license. It can also be used to clean up access before migrating your unstructured data to cloud storage. Protect your investment by covering all your cloud storage environments with a single solution.

**SAILPOINT:
THE POWER
OF IDENTITY™**

sailpoint.com

SailPoint, the leader in enterprise identity management, brings the Power of Identity to customers around the world. SailPoint's open identity platform gives organizations the power to enter new markets, scale their workforces, embrace new technologies, innovate faster and compete on a global basis. As both an industry pioneer and market leader in identity governance, SailPoint delivers security, operational efficiency and compliance to enterprises with complex IT environments. SailPoint's customers are among the world's largest companies.
