

# IdentityIQ Accelerator Pack: Rapid Business Value. Delivered.

Digital transformation has been a catalyst for growth and change amongst enterprise organizations looking to innovate and achieve a competitive edge. This transformation enables business users, but also introduces new complexities for IT organizations, including an acceleration in the number of cloud applications as well as a limited IT staff to properly on-board these applications. Deployment and application onboarding processes must evolve to address this challenge and deliver rapid business value.

As the market leader in identity governance, SailPoint has worked for years with customers of varying sizes, vertical industries, and levels of maturity to develop a deployment approach that makes clients successful. IdentityIQ® Accelerator Pack allows customers to take advantage of pre-configured, secure, best practice use cases to allow for high-quality, cost-effective and rapid deployments of IdentityIQ.

## IdentityIQ Accelerator Pack Features

IdentityIQ Accelerator Pack leverages a business analyst friendly interface aimed at simplifying processes, driving value and reducing deployment cost/time with three new services:

- Rapid Application Onboarding
- SmartSetup
- Break Glass Operations

### Rapid Application Onboarding

As organizations' digital transformation accelerates, a common trend is to be noticed: the always increasing number of applications requested by business users. Access to these applications, however, needs to be governed and secured. The question is: can IT staff keep up with the business demand?

Rapid Application Onboarding allows business analysts to quickly onboard applications into IdentityIQ and integrate them with SailPoint's best practice use cases. A task that was previously measured in weeks can now be completed in hours.

The main processes included are:

- Account and entitlement correlation and classification
- Automated provisioning workflow configuration
  - Joiner / Mover / Leaver
  - Attribute Sync
  - Native Change
- Access request and approval process

### SmartSetup

Identity governance deployments require skilled individuals to ensure success. Without them, deployments run the risk of not meeting business demand, delaying a rapid return on investment, and postponing compliance and security controls. Smart Configurator is designed to simplify common deployment tasks and accelerate time to value – leveraging non-technical IT staff. Business analysts can now easily handle the technical tasks of an IdentityIQ deployment, including:

- **Lifecycle Trigger Configuration:** A simple UI for analysts to configure the triggers that launch provisioning workflows.
- **Configure Ticketing Integration:** Allows analysts to configure IdentityIQ to open service desk tickets. The ticket's content, routing queue, and technical details can be quickly configured.
- **Mining Provisioning Policies:** Inspects application accounts, determines patterns and creates rules and policies needed to govern how an application is provisioned.

### Break Glass Operations

The Break Glass Operations feature provides administrators immediate response capabilities in case of emergency and need of instant or targeted action, including:

- Terminating an identity before an HR event is processed;
- Restoring an identity to its pre-terminated state in case of human error or bad data;
- Processing an identity through any defined provisioning workflows

## Why Use IdentityIQ Accelerator Pack

- **Driven by Best Practices**
- **Cost Effective**
- **Accelerates Time to Value**

**SAILPOINT:  
THE POWER  
OF IDENTITY™**

**sailpoint.com**

SailPoint, the leader in enterprise identity management, brings the Power of Identity to customers around the world. SailPoint's open identity platform gives organizations the power to enter new markets, scale their workforces, embrace new technologies, innovate faster and compete on a global basis. As both an industry pioneer and market leader in identity governance, SailPoint delivers security, operational efficiency and compliance to enterprises with complex IT environments. SailPoint's customers are among the world's largest companies.
