Many organizations worldwide struggle to remain secure and compliant in the face of digital transformation, increasing regulations, and pervasive cyberthreats. Ensuring only the right people get access to the right technology and data is impossible without a comprehensive view into all identities and access rights inside an organization.

With SailPoint IdentityIQ Lifecycle Manager, organizations can automate the management and control of complex identity security challenges, avoiding exposure risks for the business, brand, and bottom line.

Using a lifecycle-driven approach to automated provisioning and self-service access requests, organizations can:

• Empower business users to request and manage access to resources without burdening IT
• Increase visibility into and control of access for employees, partners, contractors, and bots
• Detect changes in a user’s role and automatically adjust access entitlements
• Enable compliance teams to respond to audits with confidence

**BENEFITS**

- **Accelerate** day 1 productivity with automated role and attribute-based access
- **Ensure** that access is changed appropriately as an employee’s role evolves
- **Reduce risk** by automatically removing accounts and access
- **Deliver** your identity program from the cloud or your own data center
Lifecycle Manager Feature Overview

Automated Provisioning
• Automate account creation and access to applications and data
• Detect changes in a user joining, moving within, or leaving an organization
• Automatically trigger changes to user’s access based on their changing role

Access Requests
• Enable quick self-service access requests when additional access is required
• Capture justifications and attachments for access requests to inform decisions and provide audit trail
• Set specific start and end dates when time-limited access approvals are required
• View a single interface to track of access requests

IdentityIQ Dashboard
• Application owners, managers, and end users can easily track all their identity data and tasks on a single screen
• Managers can review the roles and entitlements of their reports across every application in the enterprise
• Admins and security personnel can explore history, certification reviews, attribute synchronization, even after an individual changes jobs or leaves the organization

Customer Return on Investment (ROI)

$800K
annual cost savings

New user access reduced from 14 hours to
2.5 MIN
About SailPoint
SailPoint is the leading provider of identity security for the modern enterprise. Enterprise security starts and ends with identities and their access, yet the ability to manage and secure identities today has moved well beyond human capacity. Using a foundation of artificial intelligence and machine learning, the SailPoint Identity Security Platform delivers the right level of access to the right identities and resources at the right time—matching the scale, velocity, and environmental needs of today’s cloud-oriented enterprise. Our intelligent, autonomous, and integrated solutions put identity security at the core of digital business operations, enabling even the most complex organizations across the globe to build a security foundation capable of defending against today’s most pressing threats.
