

Strengthen Security with **Fully Automated Lifecycle and Role Management**

Enabling employees with the tools they need to do their jobs is one of the most basic tenets of business. However, today's corporate workforces have become a constantly changing mix of internal employees, contractors and partners, making it incredibly challenging to securely grant or revoke access privileges in a timely manner. A modern provisioning solution, delivered as a service, should be fast, flexible and provide complete visibility into access privileges without sacrificing security or becoming a burden to maintain.

IdentityNow Provisioning

Enhanced Productivity at the Speed of Business

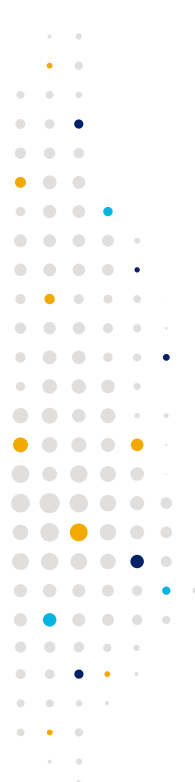

Onboard users on Day One with the applications they need to do their jobs. Integrated connectivity with HR systems, as well as pre-defined, role-based access policies, help automate user account creation and provisioning. Additionally, ensure users remain productive throughout their employment by automatically detecting and adjusting access privileges when a user's job changes.

Comprehensive Visibility and Control for Improved Compliance

Understand which systems users have access to, what level of access they've been granted and how that access is being used. When provisioning outside of policy occurs, that activity is captured and logged for audit review. Reduce the risk of compliance violations even further by automatically removing or disabling all user access upon termination.

Strengthened Security with Automated Controls

Reduce the risk of a security breach with consistent and pre-defined access policies for every role across your organization, providing a baseline for administrators to follow. Further fortify enterprise-wide security by delivering accurate reporting of all user accounts, entitlements, applications and activity.

Reduced Operational Costs with Centralized Management

Deliver secure access to all applications and resource accounts, across the organization, with a centralized approach to user lifecycle management. Easily connect a user's profile from multiple authoritative sources, track all provisioning and deprovisioning tasks, manage identity policies, and enforce access controls all from a single console.

IdentityNow Provisioning Features

Quick Set Up	Pre-defined lifecycle states plus point and click configuration of business and IT roles
On-Premises and SaaS Application Support	Easily connect to and provision accounts across the entire organization
Simplified Connectivity	Point and click configuration of application connections
Automated Account Provisioning and De-provisioning	Create, move or disable a user's application and resource accounts without manual intervention
Flexible Entitlement Management	Import and manage entitlement definitions from a wide variety of authoritative sources and applications
Manual Provisioning Monitoring	Create and track fulfillment tasks manually when automation through APIs is unavailable
Custom Attribute Support	Granular support and management for a broad spectrum of single or multi-valued attributes
Access Notifications	Automatically notify managers of new employees or access needs

SAILPOINT: THE POWER OF IDENTITY™

sailpoint.com

SailPoint, the leader in enterprise identity management, brings the Power of Identity to customers around the world. SailPoint's open identity platform gives organizations the power to enter new markets, scale their workforces, embrace new technologies, innovate faster and compete on a global basis.
