

SailPoint IdentityNow Lifecycle Manager

Maintain Secure and Compliant Access
Delivered from the Cloud

Digital transformation, regulatory requirements, and ever-expanding cyberthreats challenge organizations across the globe with an explosion of technology to secure. Ensuring only the right people get access to the right resources and data is impossible without a 360-degree view into all your identities and their access rights and the ability to manage them through automation.

SailPoint's IdentityNow Lifecycle Manager software as a service (SaaS) solution automates the management and control of complex enterprise identity security challenges to reduce risk to the business, brand, and bottom line.

Using a lifecycle-driven approach to automated provisioning and self-service access requests, organizations can:

- Empower business users to request and manage access to resources without burdening Information Technology (IT)
- Provide visibility and control of access for employees, partners, contractors, and non-human users including bots
- Detect changes in a user's role and automatically adjust access
- Empower your compliance team to respond to audits with confidence
- Enjoy the power of enterprise-grade Identity Security with the agility and convenience of the cloud

BENEFITS

- ▶ **Accelerate** day 1 productivity with automated role and attribute-based access
- ▶ **Ensure** that access is changed appropriately as an employee's role evolves
- ▶ **Reduce risk** by automatically removing accounts and access in an appropriate manner
- ▶ **Rapid deployment** with zero maintenance burden
- ▶ **Implement policies** to establish and maintain consistency and compliance

IdentityNow Lifecycle Manager provides a policy-based, fully automated approach to provisioning and user account management delivered as a SaaS solution. Since it does not require hardware or software installation, organizations can rapidly and efficiently deploy and administer Identity Security services from the cloud.

Designed with IT and security teams in mind, built-in Identity Security best practices allow for simplified administration without the need for specialized identity expertise. All new and updated features and maintenance updates are automatically delivered, requiring zero downtime and IT effort. This frees up IT resources and allows organizations to focus on delivering Identity Security program results.

The State of Identity Provisioning

8%

of enterprises have full provisioning automation

30%

can produce a full user access report

Lifecycle Management Feature Overview

Automated Provisioning

- Automate account creation and access to applications and data
- Data-driven accurate granting of birthright access and entitlements
- Detect changes in a user joining, moving, or leaving an organization
- Automatically adjust user's access based on their changing role
- Enforce least privilege access model by identifying and eliminating overprovisioned and orphan accounts

Access Requests

- Enable simple self-service access requests when additional access is required
- Capture justification for access requests to help make informed decisions and provide an audit trail
- Create time-bound access when temporary access is required
- Track progress of requests through the approval process in one simple interface

The SaaS Advantage

- **Continuous Delivery** means no upgrades, no downtime and rapid time to value
- **Configuration vs. Customization** reduces the need for deep expertise
- **Multi-tenant Microservices Architecture** provides scale, performance, and quality
- **Active Monitoring and Management** equals no in-house infrastructure to manage

Welcome to the core of Identity Security

Change races at us on all fronts: Anywhere operations. Cloud, in all its forms. Digital transformation. IoT devices. Innovation elevates your business, but comes with unprecedented security challenges that can only be fully addressed with SailPoint.

About SailPoint

SailPoint is the leading provider of identity security for the modern enterprise. Enterprise security starts and ends with identities and their access, yet the ability to manage and secure identities today has moved well beyond human capacity. Using a foundation of artificial intelligence and machine learning, the SailPoint Identity Security Platform delivers the right level of access to the right identities and resources at the right time—matching the scale, velocity, and environmental needs of today's cloud-oriented enterprise. Our intelligent, autonomous, and integrated solutions put identity security at the core of digital business operations, enabling even the most complex organizations across the globe to build a security foundation capable of defending against today's most pressing threats.
