SailPoint

SailPoint Identity Security Cloud

Get to the core of Identity Security

The SailPoint Identity Security Cloud is a bundle of SaaS capabilities that make it easy to build the right identity security program wherever you are in your identity journey.

Secure your enterprise. Empower your workforce.

Today's modern enterprise can house thousands or even millions of identities – both on premises and in the cloud – that in turn connect to billions of access points. This means that securely connecting the right people to the right technology has moved well beyond human capacity.

At SailPoint, we've developed solutions that allow the world's biggest companies to build a strong foundation grounded in identity security.

With AI and machine learning at the core, SailPoint's Identity Security Cloud delivers unmatched intelligence, frictionless automation, and comprehensive integration that allows enterprises to manage access across the most complex cloud environments.

Our experience working with leading global brands has provided insight into exactly what is needed today: targeted, organized SaaS-based products that work together as a single solution.

SailPoint Identity Security Cloud Business bundles all the core identity security capabilities that organizations need when starting or resetting an identity security program.

SailPoint Identity Security Cloud Business Plus extends offerings to include the critical components needed to secure and manage access across a hybrid infrastructure. This suite is ideal for organizations ready to take identity security to the next level.

The Difference is at the Core

Unmatched Intelligence

Intelligent 360° visibility and insight so you can adapt and ensure the security of every identity

Frictionless Automation

Automate and streamline identity processes to better discover, manage, and secure user access

Comprehensive Integration

Seamless integration that extends your ability to control access across your hybrid environment

Identity Security Cloud Business

SailPoint's Identity Security Cloud Business suite helps security teams make better decisions faster.

Provide and control all access. Give new workers the access they need from Day 1. Automatically grant or deny access to applications or data sources via an intuitive dashboard. Leverage AI insights to make fully informed access decisions.

Ensure all access remains appropriate. Review and perform access certifications across applications and data resources quickly. Reduce IT burden by eliminating repetitive manual processes.

Prevent error and fraud. Easily implement Separation of Duties (SoD) policies that enforce critical access controls across all systems and applications. Automatically detect potential conflicts of interest and prevent fraud.

Make better informed access decisions. Use AI-generated recommendations to decide whether to maintain or revoke user access.

Turn data into actionable insights. Get a complete view of access history including access anomalies and generate access reports automatically. Identify potential risks like unusual entitlements and dormant or orphaned accounts. Determine what access users should have versus what they actually have.

Automatically give workers access wherever they are. Provision access using role-based tools and adjust access automatically as workers change roles or leave the organization.

Extend identity security. Take advantage of over 100+ out-of-the box connectors, a full set of APIs, event triggers, and additional capabilities to extend identity security across a hybrid environment.

Identity Security Cloud Business Plus

SailPoint's Identity Security Cloud Business Plus suite includes all core capabilities mentioned above plus advanced SaaS-based components designed for deeper management, control, and security of access.

Get visibility and control over your entire cloud infrastructure-as-a-service, including workloads.
Flag suspicious access activity and prevent attacks via sophisticated AI capabilities. Leverage guardrails – more than 500 pre-configured policies – that address common compliance requirements and help your organization embrace cloud governance best practices.

Get a complete view of your entire SaaS footprint.
Bring all SaaS apps under centralized control to avoid toxic access combinations and security risks. Broaden your identity security visibility to uncover and mitigate hidden access risks due to shadow IT and overprovisioned accounts. Govern access to all SaaS apps with policy-driven controls.

Build and maintain roles with the right access.
Analyze current user access to suggest potential roles with the right level of access as the business evolves. Define new roles to be adopted and continually monitor for updates to existing roles to enforce the principle of least privilege. Evolve your identity program using AI-suggested roles.

Additional Solutions

SailPoint Access Risk Management (ARM)

Automates real-time access risk analysis, simplifies GRC processes, and even identifies a potential user's risks before access is granted.

SailPoint Password Management

Provides self-service password reset that enables users to reset passwords easily and securely – from anywhere, on any device.

SailPoint File Access Management (FAM)

Gives organizations visibility and control over their unstructured, regulated data across the enterprise – from IP to PII.

Begin Your Identity Security Journey Today

With a focus on the core of identity security, SailPoint enables enterprises to meet the challenge of ensuring secure access to resources without compromising productivity or innovation, delivering only the right amount access at exactly the right time.

SailPoint Identity Security Cloud is designed specifically to meet enterprises wherever they are, delivering the flexibility, ease-of-deployment, and user centricity needed in today's complex IT environment.

About SailPoint

SailPoint is the leading provider of identity security for the modern enterprise. Enterprise security starts and ends with identities and their access, yet the ability to manage and secure identities today has moved well beyond human capacity. Using a foundation of artificial intelligence and machine learning, the SailPoint Identity Security Platform delivers the right level of access to the right identities and resources at the right time—matching the scale, velocity, and environmental needs of today's cloud-oriented enterprise. Our intelligent, autonomous, and integrated solutions put identity security at the core of digital business operations, enabling even the most complex organizations across the globe to build a security foundation capable of defending against today's most pressing threats.
