Increase productivity and security with SailPoint for Microsoft Teams

As enterprises have grown their application ecosystems to meet the demands of a remote and disparate workforce, application and cloud sprawl are leaving many organizations concerned about their security posture. A [recent study](#) showed that, on average, a typical enterprise organization has **more than 1,200 cloud services**.

The proliferation of these new tools, cloud services, and apps is sparking increased security concerns regarding access. In addition, IT teams are facing increasing pressure to secure ever-expanding enterprises.

About SailPoint & Microsoft Teams

At the same time, many organizations are looking to collaboration tools like Microsoft Teams to help employees work together more efficiently. SailPoint understands this –and especially the importance of bringing identity security into the application ecosystem.

We've integrated SailPoint's advanced enterprise identity security capabilities within Microsoft Teams to give enterprises new capabilities to both preserve and enhance identity security and ensure proper access within one of the apps they use the most.

How We Help

The SailPoint/Microsoft Teams integration for IdentityNow gives users access to corporate resources right from Microsoft Teams, whether they're at their desk or on the go via the Microsoft Teams mobile app. Here's an example: Your employees are using Teams as their primary tool for collaboration, messaging, virtual meetings, and more. But what if they've just been assigned a new project and need access to a new application that wasn't included in their Day One onboarding access?

Increase productivity and security with SailPoint for Microsoft Teams

The SailPoint/Teams integration means that the employee can simply request access right from Teams – without using yet another tool or triggering a helpdesk request. Administrators and reviewers can both track and gain insights into certification campaigns via notifications that include deep links to SailPoint IdentityNow to view more details.

This seamless process eliminates the need for organizations to switch between multiple applications to request and approve access and monitor key governance activity. Users can get the access and insights they need to stay productive directly from within the tool they use the most, all while maintaining strict governance and compliance controls.

Key Benefits

With SailPoint for Microsoft Teams, users can:

- **Make application, role, or entitlement requests** from within Microsoft Teams using the shortcuts button.

- **Approve or deny new access requests with a single click** to improve employee productivity and reduce learning curves.

Increase productivity and security with SailPoint for Microsoft Teams

- **Reduce risk of internal policy violations with separation of duty support** that auto-delivers violation warnings to requesters and reviewers, as applicable. Reviewers are also able to view violation details.
- **Accelerate access requests and make it easy for employees to continue working** within Teams—no more manual IT requests.
- **Eliminate manual processes** of switching between multiple applications.
- **Get a Daily Summary for a convenient, consolidated view** of updates and required user actions, like certification campaign reviews and access request approvals.

The integration of SailPoint’s enterprise identity security and access capabilities with Microsoft Teams gives organizations the ability to deliver quick and appropriate access to essential business resources for greater flexibility, productivity, and organizational security.

About SailPoint

SailPoint is the leading provider of identity security for the modern enterprise. Enterprise security starts and ends with identities and their access, yet the ability to manage and secure identities today has moved well beyond human capacity. Using a foundation of artificial intelligence and machine learning, the SailPoint Identity Security Platform delivers the right level of access to the right identities and resources at the right time—matching the scale, velocity, and environmental needs of today’s cloud-oriented enterprise. Our intelligent, autonomous, and integrated solutions put identity security at the core of digital business operations, enabling even the most complex organizations across the globe to build a security foundation capable of defending against today’s most pressing threats.
