

SaaS Management

Shine a Light on Shadow IT and SaaS Access Risk

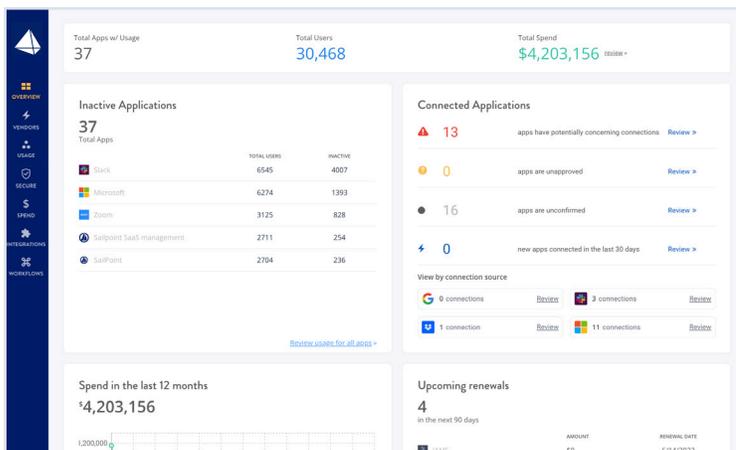

Rapid digital transformation and the shift to remote work has fueled an exponential increase in Software as a Service (SaaS) application usage within organizations known as SaaS sprawl. Employees are increasingly sourcing their own SaaS apps in order to perform their job more effectively. The resulting lack of visibility and access control means organizations face soaring SaaS licensing costs from over-provisioned accounts as well as a dramatic spike in cyberattacks. But there is an answer to managing your SaaS sprawl.

By leveraging SaaS Management from SailPoint you can:

- Discover your entire SaaS footprint
- Continuously monitor usage and risk
- Automate time-consuming and error-prone processes for SaaS tracking and audit management
- Eliminate unused licenses, inactive users, and unnecessary apps
- Manage the furthest edges of SaaS sprawl and the darkest corners of shadow information technology (IT)

BENEFITS

- ▶ **Complete visibility** of your organization’s sanctioned and unsanctioned apps
- ▶ **Protect** your data from breaches from vendors you didn’t even know had access to your data
- ▶ **Govern** the use of SaaS applications you’re not aware of
- ▶ **Mitigate SaaS** risk and improve compliance

SaaS Management Feature Overview

Scheduled Reports

- Create alerts and reports and automate the process of receiving and handling them
- Customize reports based on license type, last active date, terminated access, app risk profile, application owner, application category, team, last payment value, contract renewal date, and days active

Visibility, Control, and Compliance

- Gain visibility of your entire SaaS environment, beyond the core apps you're aware of
- Continuously monitor usage and risk
- Monitor access and protect data privacy for your entire SaaS footprint

Protect your business by managing the explosion of hidden access and SaaS sprawl

About SailPoint

SailPoint is the leading provider of identity security for the modern enterprise. Enterprise security starts and ends with identities and their access, yet the ability to manage and secure identities today has moved well beyond human capacity. Using a foundation of artificial intelligence and machine learning, the SailPoint Identity Security Platform delivers the right level of access to the right identities and resources at the right time—matching the scale, velocity, and environmental needs of today's cloud-oriented enterprise. Our intelligent, autonomous, and integrated solutions put identity security at the core of digital business operations, enabling even the most complex organizations across the globe to build a security foundation capable of defending against today's most pressing threats.
