

The State of Identity Security 2023: A Spotlight on Healthcare

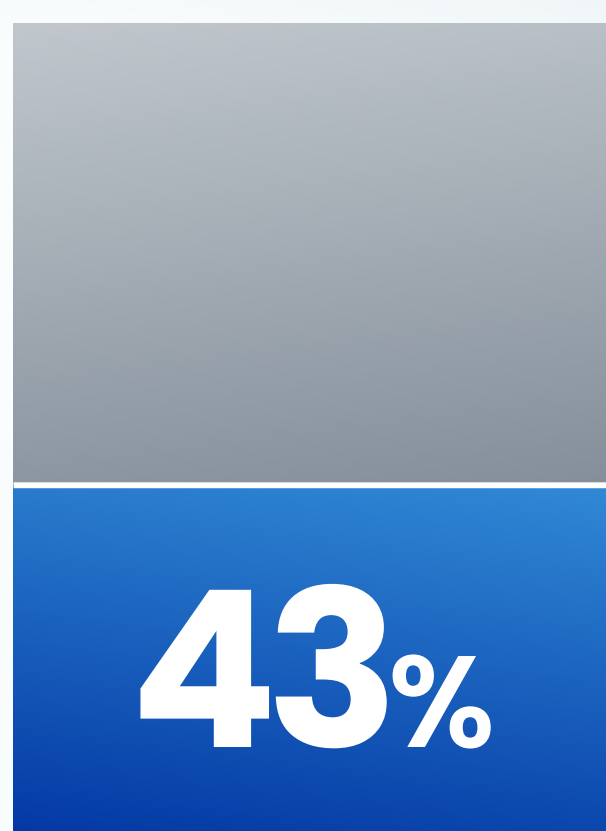

Hospitals and healthcare organizations face multiple challenges as they strive to innovate, quickly enable clinician access, and secure their organization. However, continuous data breaches, staffing shortages, and manual processes have all threatened their mission.

The SailPoint's State of Identity Security 2023: A Spotlight on Healthcare* uncovers the current state of identity security within the healthcare industry and what the future of identity security might look like in 2023 and beyond.

Costly Data Breaches

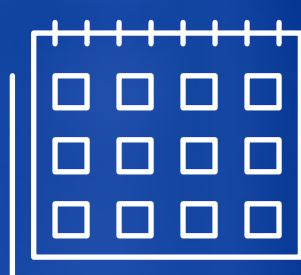

93% of healthcare organizations have faced a breach in the last two years.

43% of those who have faced a breach report operational downtime. This may result in costly ramifications in delayed patient care, revenue, and clinician satisfaction.

Managing access manually is time-consuming.

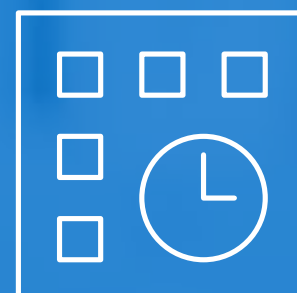

15
HOURS
A WEEK

IT professionals in healthcare spend a great deal of time managing access and permissions for all identities in their organization. Over the course of the year that's nearly 800 hours.

49% of respondents indicate that they want to increase efficiency and optimize on manual processes.

49%

“There are so many contractors/engineers and non-employed staff like interns, or medical staff rotations. They need to be onsite for a day/week/month with very specific access and then leave again. Lots of time and effort goes into these vs. normal staff.

Director ISD Compliance & QA, US

Prioritization of identity security.

61%

of respondents report having a workforce identity security/identity governance administration (IGA) in place. This reflects how vital it is to govern access to technology resources within healthcare.

Identity security is high on the agenda within healthcare: Nearly all (95%) of surveyed healthcare IT and IT security decision makers say that it's either a relatively important, critical or the number one investment priority for their organization.
