

Reduce cyber risk: Modernized identity security for state and local agencies

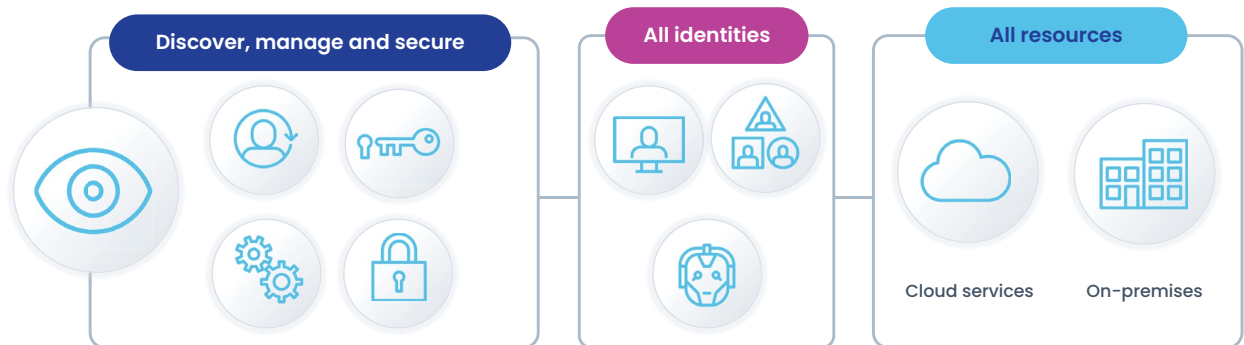

State and local agencies today are challenged with an expanding workforce — remote staff, field employees, and a growing base of contractors—who all need timely access to applications, systems, and data; both on-premises and in the cloud. They are also under continuous pressure from cybercriminals looking to infiltrate their agency.

The critical line of defense to address these issues and mitigate cyber threats is identity security (also known as identity governance). Strong security risk posture hinges on modernized identity security, and the best place to start is to follow the principle of least privilege. Using this principle agencies grant access to only what their staff need to do their job and nothing more.

An additional step to mitigate risk is replacing manual processes with automation. Automating access reduces the likelihood of over-provisioning or back door access by former workers and third-party non-employees. It also speeds up onboarding, helping to improve employee productivity.

With SailPoint, local agencies can reduce risk and increase efficiency by:

- Automating the discovery, management, and control of all user access
- Gaining centralized visibility to access across cloud, on-premises, and hybrid environments
- Quickly deprovisioning access as someone changes departments or leaves the agency
- Identifying SoD violations and sensitive data access risks
- Reducing time to certify user access from weeks to minutes
- Maintaining continuous compliance with more accurate access certification decisions
- Extending identity security to manage non-employees and third parties

Unified identity security with SailPoint Identity Security Cloud

SailPoint Identity Security Cloud harnesses the power of AI and machine learning to help agencies seamlessly and autonomously deliver the right access to the right identities and technology resources at exactly the right time.

AI plays a significant role in strengthening security by helping to detect and remediate vulnerabilities – while also improving operational efficiencies. It enables agencies to easily spot risky users and access outliers, helping you be more secure, more resilient, and future proof.

Our foundation is built on a robust platform that unifies identity security across the modern enterprise. It delivers deep configuration, comprehensive insights and reporting, tangible cross-product and extensible value, workflows to empower powerful automation, comprehensive connectivity, and new levels of productivity and security.

Extend identity security to legacy systems

Core identity security should also extend to the customized, legacy, and homegrown applications and systems that are ubiquitous in the public sector.

SailPoint Connectivity extends core identity security capabilities to the critical applications, resources, and systems that agencies use every day. An extensive [Integrations Catalog](#) of connectivity solutions includes deep integrations with strategic customer applications; comprehensive vertical and category connectivity; and standard, low-code, connectivity tools to effectively integrate SailPoint enterprise identity security with any system.

Reduce cyber risk: Modernized identity security for state and local agencies

We extend your ability to embed identity context across hybrid environments and centrally manage and control access – modernizing your organization’s security posture to ensure clear visibility into who has access, enforce consistent policies, detect threats, and quickly remediate risks.

Secure and streamline your cyber risk mitigation processes. Contact us to learn how SailPoint can help you meet your agency’s identity security needs.

About SailPoint

SailPoint equips the modern enterprise to effortlessly manage and secure access to applications and data through the lens of identity – at speed and scale. As the category creator, we continuously reinvent identity security as the foundation of the secure enterprise. SailPoint delivers a unified, intelligent, extensible platform built to defend against today’s dynamic, identity-centric cyber threats while enhancing productivity and efficiency. SailPoint helps the world’s most complex, sophisticated enterprises create a secure technology ecosystem that fuels business transformation.
