

# SecZetta Non-Employee Authoritative Source for SailPoint IdentityNow™

## QUICK FACTS

- Certified IdentityNow integration
- Gartner believes that IAM programs need to be purpose built to support 3<sup>rd</sup> parties
- 40% of the modern workforce is made up of non-employees
- Nearly 67% of all data breaches can be attributed to a 3<sup>rd</sup> party

## The Power of Identity Risk & Lifecycle Management

Implement an identity strategy to simplify non-employee on-boarding and off-boarding workflows managed by everyone involved, including Human Resources, IT Security, and different lines of business. Remove manual ad-hoc processes and systems that put your organization at risk. Gain complete visibility, control, and auditing of **ALL** non-employee identities.

With SecZetta's integration for SailPoint, customers can have one authoritative source (system of record) for user data across the entire organization. Built with a powerful business process and relationship engine ensuring any identity type can be properly onboarded and maintained so SailPoint IdentityNow™ can appropriately grant and govern access, even to third party, non-employees not in the Human Resource system.

## BENEFITS OF INTEGRATION

Address the risk and challenges of onboarding and managing non-employees. Easily capture and manage any information your business requires about an individual, organization or group.

**FLEXIBLE  
CONFIGURATION**

**LIFECYCLE  
CONFIGURATION**

**BUILT WITH THE  
BUSINESS IN MIND**

**BUILT WITH THE  
ADMIN IN MIND**

**RELATIONSHIP  
MANAGEMENT**

## WHAT PROBLEM DOES IT SOLVE?

The traditional approach to managing identities through a Human Resource or Identity Governance system is no longer enough, as two-thirds of all data breaches today occur because of a third party. Businesses need a solution for managing and identifying the full universe of people that touch the corporation, including non-employee identities and their relationships to other identities. Leveraging the integration between SailPoint and SecZetta customers can easily manage the simplest to the most complex scenarios when it comes to non-employee identities.

The integration allows for a handful of use cases which can be broken down to three high level categories; Onboarding, Lifecycle, and Termination. Some of those use cases can be seen below:

### GARTNER INC., FRAMED THE PROBLEM WELL:

The identity lifecycle is a critical control for account administration, providing a means to bring users on-board in a controlled manner and then remove their access when they are no longer associated with the organization.

In an ideal world, an identity governance solution would simply act as a conduit between an organization's authoritative sources for people information and managed information systems. However, organizational processes for tracking people and information about them are fragmented and incomplete, often not extending beyond coverage of employees maintained in human
